

# MOBILE SHOP

## OVERVIEW:

I have made mobile shop using java for the frontend and mysql for the back end. This project is very helpful for the people who manages mobile shops . This contains whole information of all the mobile phones available in shop .

## FRONTEND:

Frontend is made in JAVA using NetBeans IDE.

## BACKEND:

Backend is made in MYSQL using XAMPP as server.

## IDE USED:

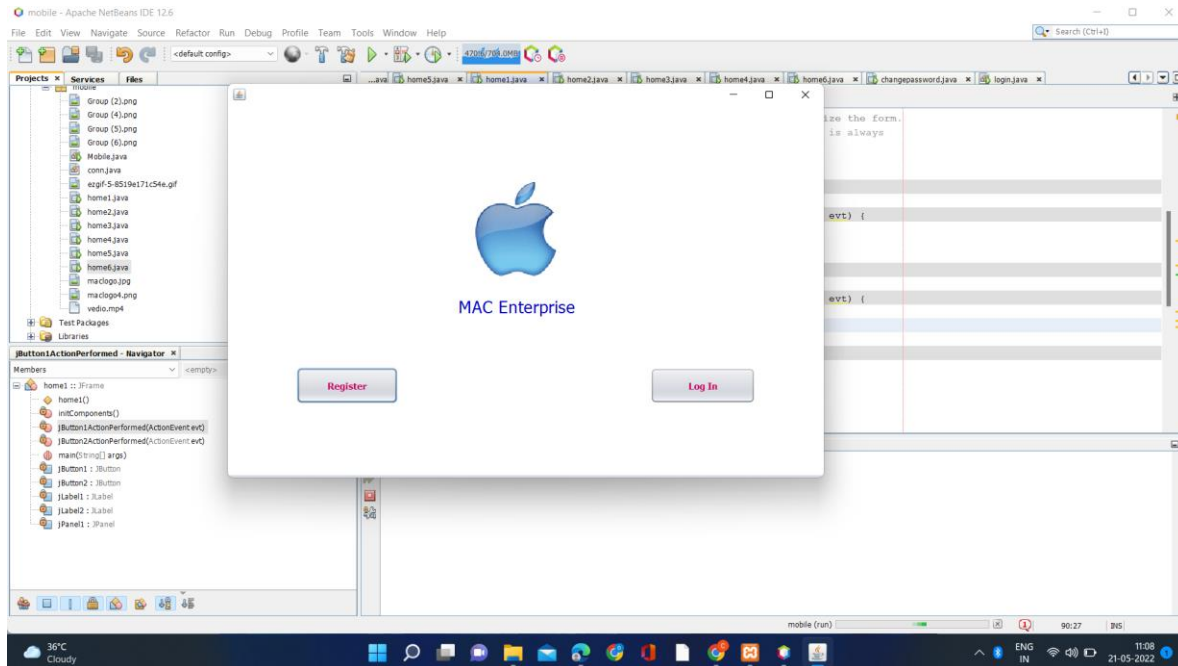

NetBeans is used as main IDE.

## SERVER:

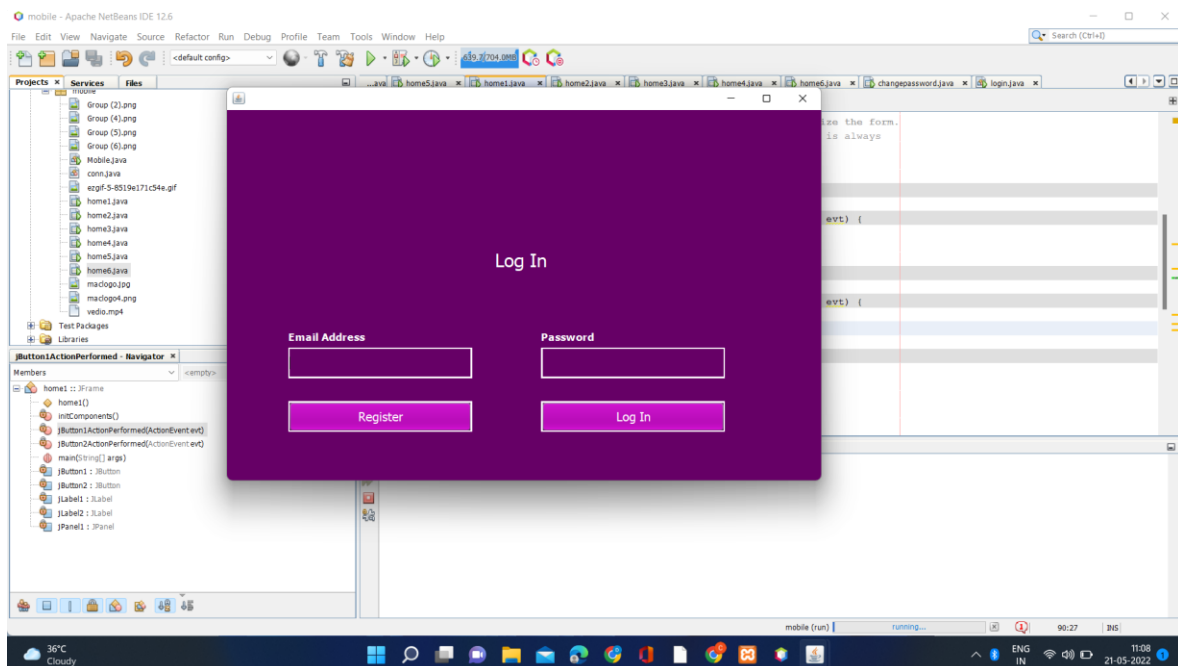

XAMPP is used as server for testing our project.

Here is the required Screenshots How project Works:

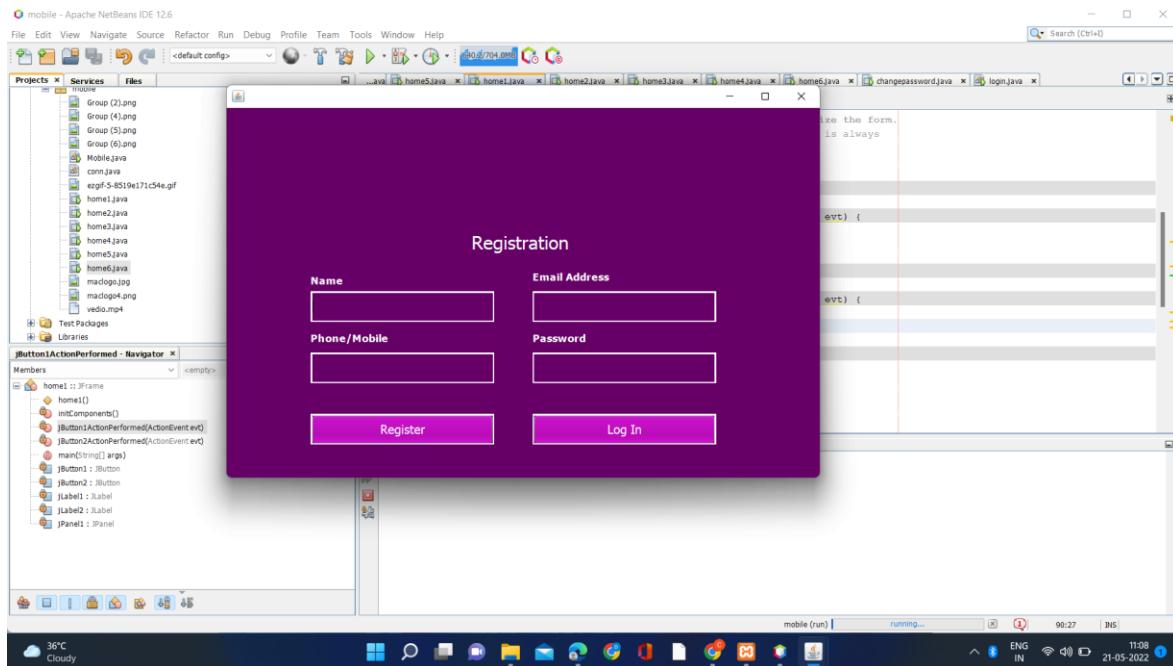

1. The first page is login as user or as admin.

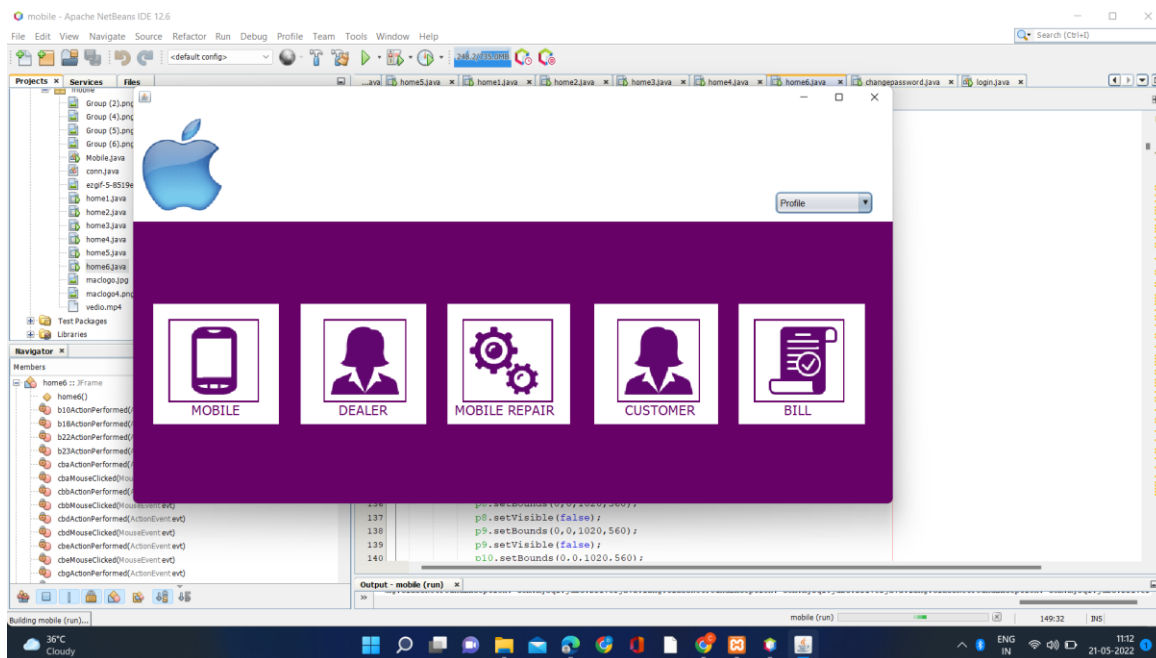

2. Login Page
